

InCord

Custom Safety Netting Solutions

THEATRE Scenic Netting & Rope

ADD VISUAL IMPACT

Custom designs and attention to detail create an environment that is innovative, timeless, and above all safe. InCord specializes in the science of netting and integrates it into any theatrical setting – indoors or out. Let InCord configure your netting, hardware, and attachment options to remove the guess work and create an unforgettable experience.

- Interactive
- Custom Designed

MATERIALS

N815SD

N815BL

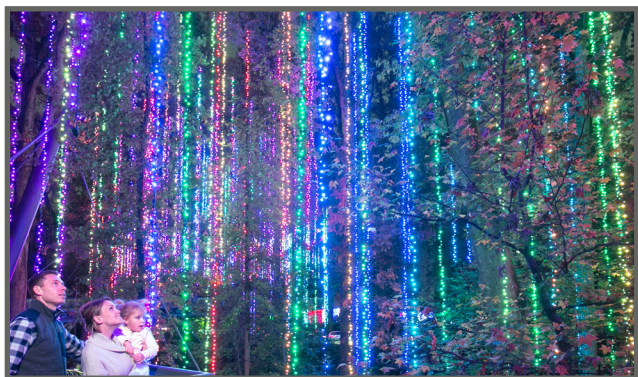

N815BK

N815 is knotless netting high tenacity polypropylene material (HTPP) with a 1¾" square mesh available in a variety of colors. HTPP fiber is highly resistant to abrasion, light weight, and easy to store. Great for multiple uses.

Our wide variety of netting and rope materials can be tailored to suit your production's needs. Many of our products are available in multiple color

options and sizes so that no matter what you envision, InCord's theatrical netting experts can help bring your scene to life while ensuring the safety of performers and audience alike.

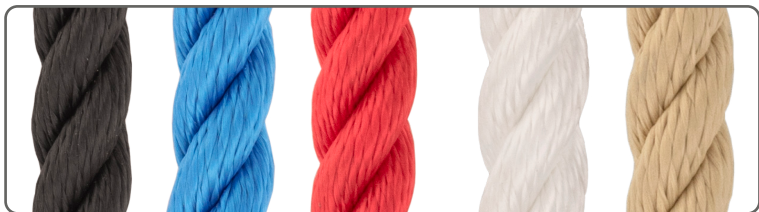

CREATE AN EXPERIENCE

Enchant and delight with a beautiful, dream-like environment. InCord netting for trellis lighting provides a full grid of possible drop points to randomize light strings and control the density of your lighting. Net panels install where you need them, capable of spanning open areas such as courtyards, lobbies, and theatre stages.

CAPTIVATE YOUR AUDIENCE

Hand-woven from either high-strength polyester rope or ProManila Ultra II, cargo style rope nets from InCord are built for repeat performances.

5/8" Polyester Rope

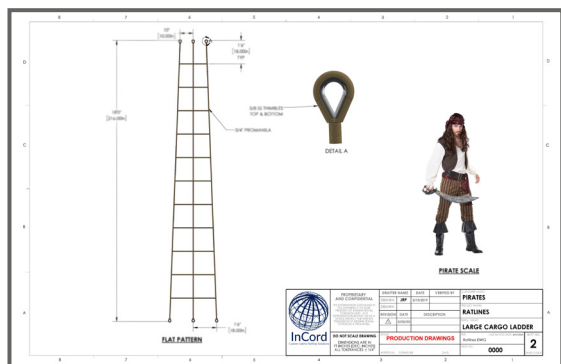

Polyester 5/8" three-strand rope has the strength of nylon without the stretch. A smooth working surface means it is easy to handle and ideal for creating comfortable cargo climbing nets.

Add action with nets your performers can safely climb.

The safe and reliable construction can withstand multiple performers at once, giving choreographers the freedom to use netting as their canvas.

ENGINEERING

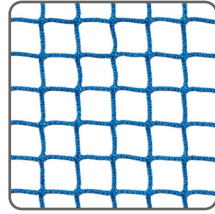

Promanila Ultra II

Promanila is constructed of high-tenacity co-polymer olefin fibers that yield a rope that is 30 to 35 percent stronger than standard polypropylene rope.

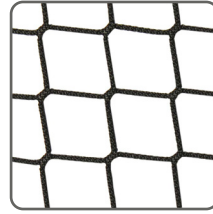

Partner with our expert design team to develop a custom installation plan to include all the necessary components for a net or rope element to enhance your production. Using state-of-the-art design programs, our engineering department provides detailed drawings and instructions for implementing and maintaining your custom net and rope elements.
