

Add an extra level of safety to an otherwise unprotected area when ascending or descending an exposed ladder. Extend protection from the top rail to the underside of the ladder cage with InCord CageX Safety Nets.

The CageX Safety Net consists of a 4" mesh High Tenacity Polypropylene (HTPP) net panel, bound with a 1/4" polyester cord border.

Polyester straps with attached cam buckles secure the net to the rail and ladder cage. No special tools or training are required.

- Moisture and UV resistant
- Easy to attach
- Standard or custom sizes
