

Loading Dock Nets

Open-edge fall protection for loading docks and similar hazards.

InCord®
Custom Safety Netting Solutions

InCord Loading Dock Nets are tensioned nets used to keep freight from impeding dock doors and to protect pallets, handcars, and personnel when doors are open.

Loading Dock Nets install quickly to welded steel stanchions using snap hooks and web straps. They can be extended to span several dock door openings using eye bolts installed on either side of a shared center stanchion.

Loading Dock Nets are manufactured using InCord WebNets™, a 1" polyester webbing material that provides an optimal solution for low deflection, high tension containment.

Available in 8" OC mesh size.

Different webbing materials are available upon request.

- Improve personnel safety
- 300 lb. side load rating (tested to 600 lb.)
- Does not interfere with overhead doors
- Easy set up and removal
