# Residential Safety Nets

Interior fall protection for wood frame structures.

InCord®
Custom Safety Netting Solutions

Residential Safety Net (RSN) systems from InCord provide interior fall protection for wood frame structures. Installed right after plumb and line, RSNs boost site safety and confidence at a phase when fall danger is at its greatest. RSNs are OSHA compliant and enables multiple trades to work simultaneously without having to set up heavy interior scaffolding.

- **Reusable & Adaptable**

- **Moisture & UV Resistant**

- **Easy to Install**

- **OSHA & ANSI Compliant**

Residential Safety Nets come down as easily as they go up for transport to the next job site where they may be used again. Just one RSN is adjustable on-site to up to twenty-five sizes. Inside-woven border ropes allow the installer to take in excess netting in one-foot increments to size the system to various structure dimensions.

UV resistant, commercial grade netting means superior durability and safety. Our sales and engineering team works with you to create the solution you are looking for - no matter the size of the project.

## Industrial Grade Materials

M3000 (4" Mesh)

Unlike nylon, the fiber of InCord's M3000 High Tenacity Polypropylene Knotless Netting (HTPP) doesn't stretch, lessening the system's deflection when clearance is limited. A properly installed RSN system can safely and repeatedly arrest a fall within approximately four feet.

Quickly bring your job site into compliance and avoid the hassle of having to set up interior scaffolding. Install easily using our detailed instructions and drawings.

2 Cross ropes

3 Perimeter ropes one foot apart

Cross ropes knotted at 8 perimeter intersections

Attachment Options

Residential Safety Nets systems are complete with high-quality attachments. RSNs install from 5,000-pound perimeter ropes to the top plate with 1" web straps. The integrated non-slip cam buckle allows for easy cinching and gradual tensioning of the net, as opposed to pulling the entire net under tension to fixed anchor points.

Partner with our expert design team to develop a custom installation plan to include all the necessary components for your Residential Safety Net.
