

# Gangway Safety Nets

Fall protection systems for use between a ship and quayside.

**InCord®**  
Custom Safety Netting Solutions

InCord's Gangway Safety Net fall protection is used for safety where there is a risk of falls between the ship and quayside during embarkation and disembarkation.

UV and corrosion resistant commercial grade netting paired with high quality, industrial grade stainless steel hardware means superior durability and safety.

- Custom Configured
- Improves Safety
- OSHA & ANSI Compliant
- Corrosion & UV Resistant

The safety net and its function for marine gangway safety is derived from the InCord Personnel Safety Net (PSN) of standard design. It is made with high tenacity knotted nylon.

Gangway Safety Net is supplied with adjustable web straps with attached cam buckles or snap hooks for positioning and securing the net into place under a ship's gangway. Our netting experts can help configure your hardware options and netting specifications.

## Tested & Proven

Custom designed with safety as a top priority, InCord's products are rigorously tested to ensure our materials meet or exceed industry standards. The construction and strength of the InCord Gangway Safety Net meets and exceeds the above OSHA requirements when used as directed. InCord PSN material is rated for a maximum drop test impact of 17,500 lbf.
