

InCord®
Custom Safety Netting Solutions

CONSTRUCTION SAFETY SOLUTIONS

Since 1995, InCord has specialized in custom netting solutions that are tailored to the application. Our team of netting experts will determine the best and most economical solution to fit your needs. Typical lead times are two weeks or less.

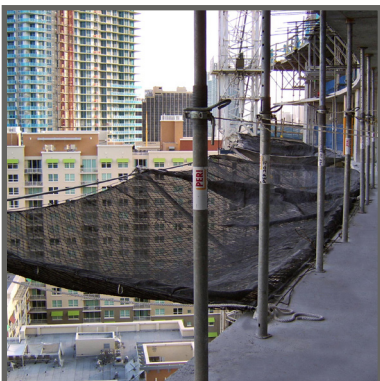

InCord stocks millions of square feet of netting, including many fire-retardant (FR) materials that meet or exceed NFPA-701 Type 1 or Type 2 testing standards.

RocBloc™ Debris Containment

RocBloc panels wrap directly around a debris source to prevent materials from becoming hazardous falling or flying objects.

- Contains up to 10,000 pounds of worksite debris
- Installs close to or directly against debris sources
- Tensioned wire cable system sets up quickly and easily
- Pairs with non-porous liner for integrated liquid containment

Personnel Safety Nets

Fall protection that provides maximum protection while meeting strict OSHA and ANSI requirements.

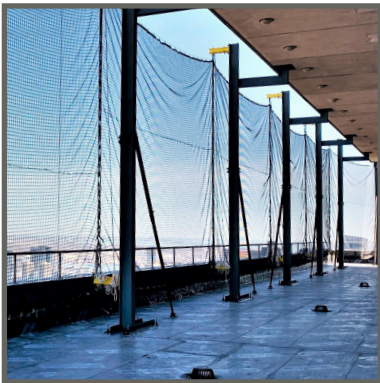

- Tested to repeated impacts of 17,500 pounds
- Optional, easy-attach liner to catch tools and other debris
- Provides confidence to your crews
- Potentially reduces insurance premiums and liability

Work Platform Netting

High-tension netting that installs between existing structural members and is supported by an interwoven grid of straps.

- Allows for crew mobility across entire elevated work area
- No cumbersome lifts or scaffolds
- OSHA Compliant
- Provides maximum maneuverability across large spans

Vertical Debris Netting

Surround work sites and protect personnel, pedestrians, and nearby structures from falling material.

- Custom sized panels/full rolls
- Wind & sun protection
- Light or heavy duty debris containment

Steel Decking Safety Nets

Implement passive fall protection for improved safety and efficiency when working at elevated heights.

- Creates a protective barrier that prevents falls and catches debris
- Securely fastens to the steel decking structure underside
- No interference with the steel decking installation above the floor
- Customizable to fit different types of steel decking configurations

Residential Contractor Nets

Boost site safety and confidence by providing interior fall protection for wood frame structures at a phase when fall danger is at its greatest.

- Saves time by enabling multiple trades to work simultaneously
- Eliminates the need for obtrusive interior scaffolding
- Installs quickly and easily adjusts to 25 different sizes
- Reusable and economical

Cargo Lifting Nets

Safely hoist and transport bulky or awkward materials and equipment without adding the excessive weight of chains or lifting beams.

- Bundles and lifts loads up to 6,000 lbs
- Reinforced loops provide extra strength and durability
- Optional quick-release for increased efficiency
- Encloses cargo completely

Dralo Wire-Rope Nets

- Fencing & Barriers
- Heavy Duty Containment
- Galvanized or Stainless Steel
- Continuous Wire-Loop Construction
- Optional Wire End Fittings

More Construction Solutions from InCord:

Pour-in-Place Netting

The ideal solution for fall protection in concrete construction applications involving floor openings with a risk of falling through.

Skylight Nets

Add an enhanced level of safety for roof work near skylight or hatch openings. Available in stock or custom sizes.

Drain Pipe Debris Nets

A cost-effective, end-of-pipe solution that stops the discharge of debris and trash from contaminating local water reserves and entering waterways and oceans.

Lifting & Rigging Solutions

InCord manufactures a full line of tie-down assemblies, slings, and specialty straps.

InCord maintains strict ISO 9001 standards standards to guarantee outstanding product quality and minimal error rate through a system of accountable, consistent and self-correcting methods.

An on-site test frame provides InCord with the ability to guarantee impeccable quality control of all its custom made safety netting products.
