

StreamSentry

Stormwater Drainage Net Systems

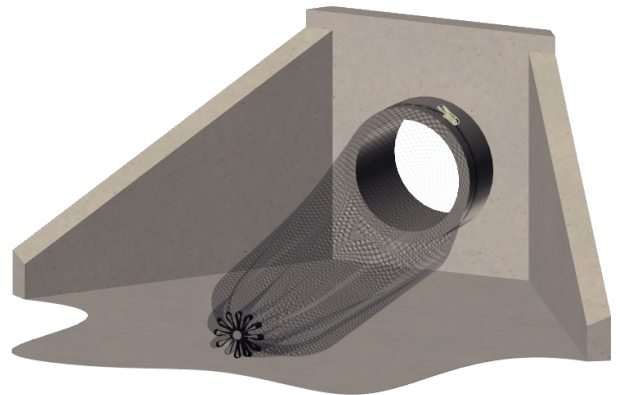

InCord[®]
Custom Safety Netting Solutions

StreamSentry Drainage Nets effectively capture and prevent debris and litter from entering stormwater systems. As stormwater flows through the nets, they trap items such as food packaging, cans, leaves, sediments, and other organic matter. Once the nets become full, they can be easily detached and emptied.

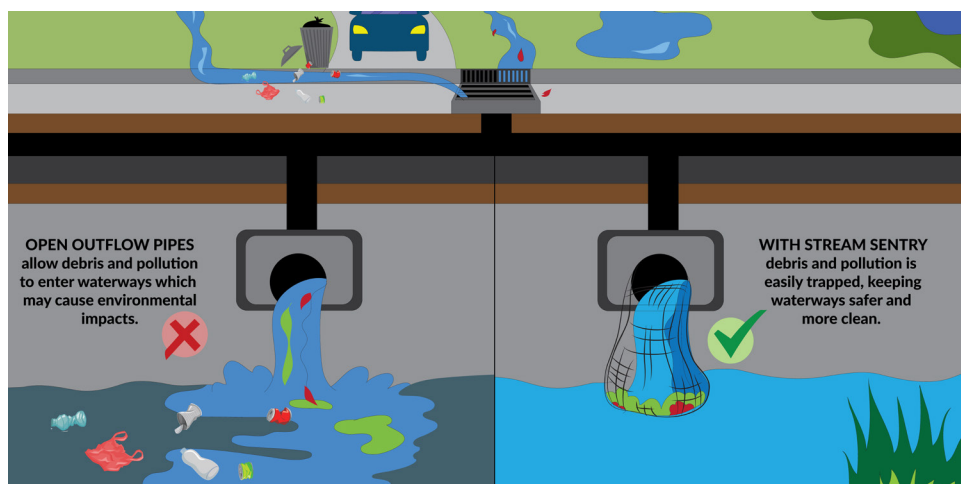

Made from high tenacity polypropylene, InCord drainage nets are incredibly durable and can endure strong water flow.

- Two mounting configurations available: flush mount and collar mount.
- Custom sizes available
- Simple installation and maintenance
